

## October is Here!

### It's National Cyber Security Month!

Even though it is Halloween, you shouldn't have to be scared of being hacked. Phishing and Spoofing threats are getting more and more creative. Even if you have the proper security measures in place, stuff can still slip through. Intrac recommends you be as careful as ever. Based upon recent threats, here is what you should look for:

- Any emails from people that aren't regular contacts or you weren't expecting
- Check the actual email address that an email was sent from, not just the display name
- Being prompted to sign back into your email when you haven't had to before
- Non-routine emails from Microsoft
- Missing emails that you were expecting
- Any email that looks suspicious

If you are unsure, please just contact us and ask. We are always happy to help!

#### Here are the security features Intrac can offer you:

- A tested and proven Anti-Virus solution with EndPoint Security Monitored Daily
- A reputable and industry leading Network Firewall Appliance
- A full review of your network security infrastructure
- Advanced Capture Threat Detection and Anti-Spam
- Scanning of all emails coming in and going out for Phishing and Malware
- IT Automation that automatically updates your computer and scans it for malware daily
- 2 Factor Authentication email and VPN solutions
- Full management and monitoring of your Microsoft Security Suite
- Local and Cloud Backups of Servers, Computers, and Office Suites to make your network resistant to Ransomware
- Timely Response to review potential threats or to act in the event of a breach

**Contact Intrac now for a FREE review of your IT Security Infrastructure and let us protect you:**
